## COVID-19 assessment

Helping you provide the  
best possible support for  
your front line workers

## Content

- Challenging times
- Frontline and key workers
- Support where it is most needed
- Covid19 assessment and triage tool
- Integration and innovation
- Duty of care

**We help companies protect and support their front-line employees as they return to work from lockdown.**

As lockdowns are eased companies need to restart their business and get day to day operations and projects moving again. They need their key employees and front line workers to be productive and focused. However coronavirus has not gone away and presents a very real threat to the health and wellbeing of employees. This creates significant challenges:

- Employees are nervous and wary of returning to their work place
- Social distancing may be difficult in some industrial settings
- Some employees may be carrying coronavirus without any symptoms
- Employees may come into contact with large numbers of customers, co-workers and the general public
- Queuing at testing stations may be disruptive to operations and time consuming
- Employers must protect their employees as their most valuable assets
- Employers need to demonstrate they are meeting their HSE standards and commitments

These concerns are particularly acute for organisations whose employees work in large teams or in the field, remote from headquarters or a local office:

- Construction workers
- Utility engineers
- Logistics workers
- Delivery drivers
- Call centre agents
- Social workers
- Road maintenance teams
- Factory workers
- Food production
- Supermarket staff
- Agricultural workers

Gathering regular health and wellbeing information manually from large numbers of employees who are physically distributed is a significant challenge for line and site managers

**How do companies demonstrate to their employees that they are both aware of their concerns and have in place an effective solution?**

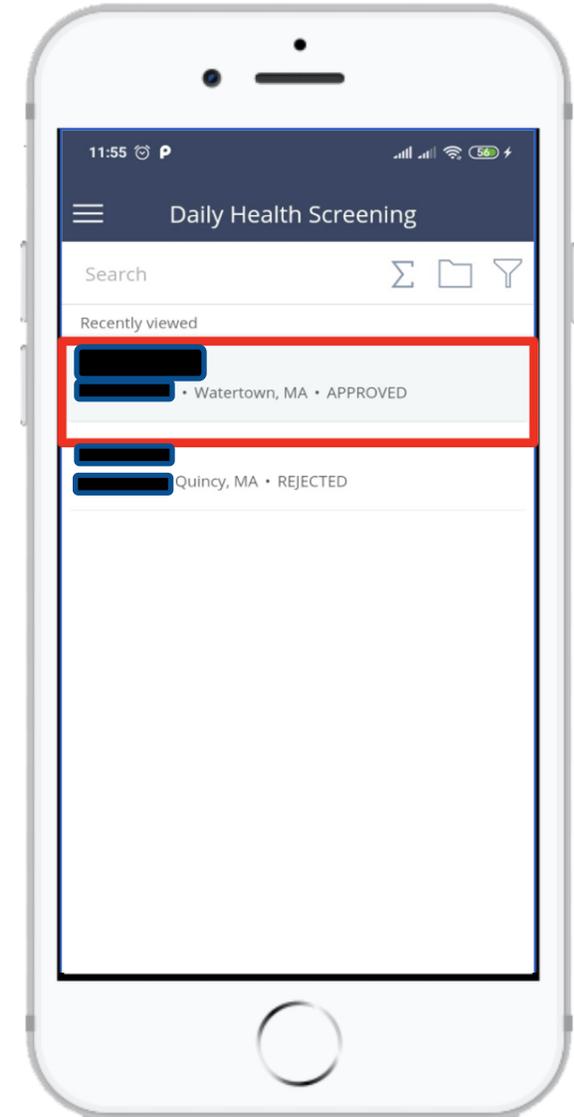

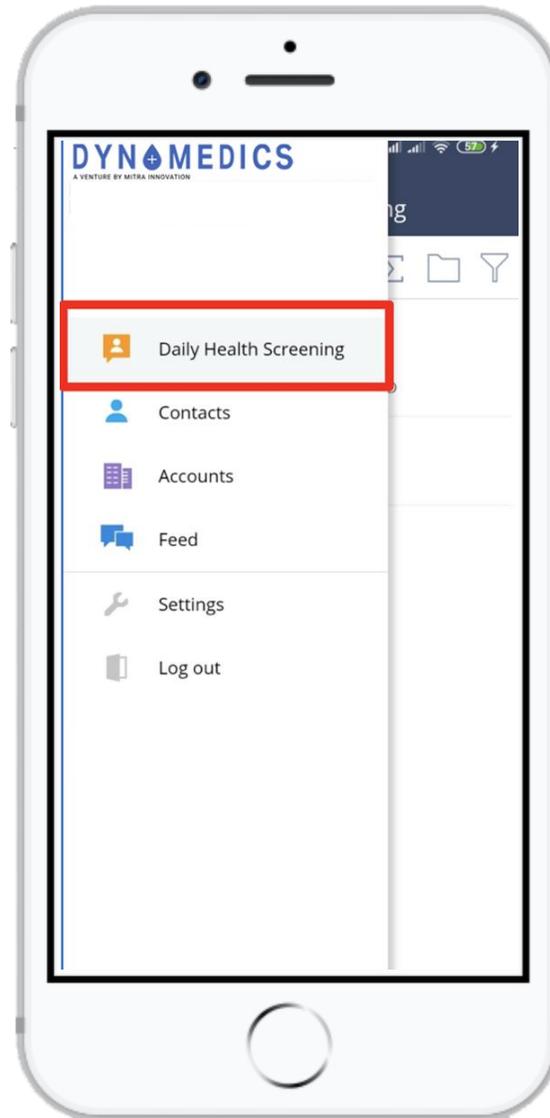

Dynamedics is a new digital health platform designed to help companies deliver effective remote health and wellbeing services to employees. Our COVID-19 digital assessment tool gathers regular health data from employees. Any early symptoms of coronavirus infection results in rapid escalation so that employees at risk can be supported and isolated from their co-workers if necessary.

- Remote automated wellbeing assessment with employees wherever they are
- Pre-screen employees before they arrive on site
- Assessment based on clinical guidelines ensuring symptoms are captured accurately and early
- Repeat frequently to spot patterns across teams and locations
- Instant recommendations for both employees and managers
- Builds employee confidence in their employer
- Management dashboards provide company wide oversight
- Employers can demonstrate HSE compliance and are "audit ready"

Our COVID-19 assessment tool has been designed for simple integration and agile innovation. If you need modifications to the assessment tool to fit with your processes and operational model this can be done rapidly and at minimal cost.

- Accessible through any smartphone or tablet
- Rapid and seamless integration with HR systems and employee records.
- Create and adapt workflows and publish questionnaire updates
- Daily patient self assessment of symptoms
- Automation of assessment removes manual data gathering
- Regular social distancing and hygiene reminders

It is vital that both senior management, line managers and HR monitor their employees on a continuous basis to fulfil their HSE obligations and their duty of care to their workers

- Coherent and consistent health and safety plan across the organisation
- Assign roles and responsibilities to local site managers
- Monitor individuals, teams and departments
- Track trends and anomalies for strategic planning and action
- Digital record of all assessments and follow up interactions
- Maintain compliance with health and safety standards and government regulations
- “Audit Ready” at all times

The image displays two overlapping screenshots of the Dynamedics software interface. The top screenshot shows the 'COVID19 Prescreening' form, and the bottom screenshot shows the 'Dashboards' section with a 'Daily Site Attendance' report.

### COVID19 Prescreening Form

**Standard Operating Procedure\***  
COVID19 Prescreening

**Purpose**  
Update all employees with COVID 19 symptoms and increase awareness on how to adapt to social distancing measures in the workplace

**Workgroup**

**Employee\***
